

Config options (can be changed in /configs/config.php)

```
define('LANGUAGE', 'EN');
// NL, EN, FR, DE, ES, PL
// if admin has set a language in the settings form, this setting will be
used when ALLOW_ACCESS_BY is free.

$current_languages = array( 'EN' => 'English',
                             'NL' => 'Dutch',
                             'DE' => 'German',
                             'FR' => 'French',
                             'PL' => 'Polish',
                             'ES' => 'Spanish',
                             'NO' => 'Norwegian');
// used to set the languages in the dropdownlists

define('ALLOW_ACCESS_BY', 'login');
// ip, free or login. If `ip` then users get user_id 1000000.

define('ADMIN_USER_ID', 1);
// only used when you didn't do the insert queries from the sql file. You
can put the ID of one or more users here. When you did do the query, the
admin_user_id is taken from the row where user_type is 'admin'. More than 1
ID is also possible. Example: 1,2

REMOVED define('ONLY_ADMIN_CAN_ADD_AND_EDIT', false);
// only the admin can add and edit events. People who visit the calendar
can only view

define('ADMIN_HAS_FULL_CONTROL', false);
// when true the calendar options (like can-add and can-edit) are ignored

/**
 * ACCESS TYPE 'IP' OPTIONS
 */

define('CAL_IP', '111.222.333.444');
// ip of the calendar user. CAL_IP IS NEEDED WHEN ALLOW_ACCESS_BY IS `IP` !

/**
 * ACCESS TYPE 'IP' AND 'FREE' OPTIONS
 */

define('IP_AND_FREE_ACCESS_SAVED_USER_ID', 1000000);
// 1000000 or another user_id

/**
 * ACCESS TYPE 'FREE' OPTIONS
 */

define('ADMIN_CAN_LOGIN_FROM_ADMIN_URL', false);
```

```

// true: the admin can login from ../admin url. When set to true,
ALLOW_ACCESS_BY must be 'free', Otherwise it doesn't work.

define('SHOW_SMALL_LOGIN_LINK', true);
// true: a login link is visible above the calendar.
// false: depends on ALLOW_ACCESS_BY what happens: When ALLOW_ACCESS_BY is
'free' then visitors will see the calendar, when ALLOW_ACCESS_BY is 'login'
visitors will be redirected to the login page.

/**
 * ACCESS TYPE 'LOGIN' AND 'FREE' OPTIONS
 */

REMOVED (is settled by share_type of the calendar now, public or private)
define('USERS_CAN_SEE_ITEMS_FROM_OTHERS', true);
// Shared calendar: Users can see items from others.

REMOVED (can be set separately for each calendar now)
define('USERS_CAN_CHANGE_ITEMS_FROM_OTHERS', false);
// Shared calendar: Users can also change items from others.

REMOVED (can be set separately for each calendar now)
define('USERS_CAN_DELETE_ITEMS_FROM_OTHERS', false);
// Shared calendar: Users can also delete items from others.

/**
 * ACCESS TYPE 'LOGIN' OPTIONS
 */

define('USERS_CAN_REGISTER', true);
// A new user can register by clicking on the register button in the login
screen.

define('SEND_ACTIVATION_MAIL', true);
// true, an email is send to the new user with an activation link. The user
is activated after click on activation link and filling in a password on
the webpage the link goes to.
// false, the user is immediately activated, password is in register form,
when SHOW_CREATED_PASSWORD_WHEN_ADMIN_ADDS_USER is set to true. (or in the
email when admin registers a user with add_user form)

define('ACTIVATION_MAIL_SUBJECT', 'Welcome %USERNAME%');
// The subject of the activation mail.
// %USERNAME% will be replaced by the actual username of the user.

define('RESET_PASSWORD_MAIL_SUBJECT', 'Reset your password');
// The subject of the reset_password mail

/**
 * MAIL
 */

define('FROM_EMAILADDRESS', 'your_emailaddress');
// used as 'from' address when mails are send to users.

define('ADMIN_EMAILADDRESS', '');
// used mail address to send the copy of the add_user mail.

```

```

define('IGNORE_TIMEZONE', false);
// If you or users have problems with timezone or daylight saving and have
time issues in the calendar, you can set this to false or if you or your
users are all in the same country/area, you can set your TIMEZONE. Problems
can occur when the calendar is on a server in another country and you or
users are in a country with daylight saving time.

// OPTIONAL
define('TIMEZONE', '');
// example: America/New_York, if left empty the clients timezone will be
used.

/**
